

NuKorc and Rollerforks®

NuKorc manufacture high technology synthetic wine closures and sell them in all wine growing regions of the world.

Until recently, NuKorc had been sending these products packaged in cardboard cartons on wooden pallets, timber palletized cardboard boxes have three major drawbacks:-

1. They must be fumigated in some destination ports
2. They take up dead space in the container
3. They are expensive to buy and do not come back.

Linde Materials Handling recognized the advantages of palletless handling at NuKorc and invited Sattach to help them with a demonstration of the Rollerforks®, NuKorc was amazed by the simple yet effective design of the Rollerforks® and what they could do with them was instantly recognized.

NuKorc now ship their product in cardboard cartons WITHOUT timber pallets. The cartons have been made bigger to hold more product and without the dead space they are fitting more product into every container, savings of about 20%! Purchase and fumigation costs of the timber pallets have been completely eliminated. With these three savings the initial cost of the Rollerforks® will be paid off in no time at all.
